Program Length: Flexible – option for tailored training of 3 - 12 months.

Specialty Certification: N/A

Special Interest Areas: Apart from the large volume of clinical activities, clinical research in the field of pelvic organ prolapse, quality of life, sexual function and urinary incontinence is supported.

Program Description: In order to increase the exposure for international Fellows we have constructed a special program which includes multidisciplinary approach to pelvic floor dysfunction. The fellowship is flexible in length between 3-12 months. The program offers a comprehensive approach to clinical evaluation and management of women with pelvic floor dysfunction including urinary and fecal incontinence, pelvic organ prolapse, defecatory dysfunction and voiding dysfunction. The unit provides Urodynamic tests and pelvic floor ultrasound. Surgical management emphasizes vaginal and laparoscopic minimally invasive approaches including sacral neuromodulation and PTNS therapy. Our hospital is fully computerized, and the database provides many unique research opportunities.
